

ABSTRACT

A fixing system for fixing a panel of fragile material to a bearing structure, including at least one point fastener engaging with at least one first contact region produced in the panel. The point fastener includes a first anchoring part at a first contact region and a second anchoring part at a second contact region situated on the panel. The first and second anchoring parts are connected by at least one adjusting device configured to bring the first and second anchoring parts to bear against the first and second contact regions respectively and are situated in the plane of the panel.
